

Document Digitization & Smart Search System

Updated Project Scope and Features

Client : Mr. Niranjana Udayanga

Group Members: Deshabandu A.S. - EG/2022/4991

Dewmin J.P.H. - EG/2022/4994

Shashinthya K.A.I - EG/2022/5344

Walgama S.S - EG/2022/5385

Complete List of Features (Including New Additions)

Core Features (Existing):-

- Document capture through mobile app (auto-cropping, enhancement, deskewing)
- Optical Character Recognition (OCR) for text extraction
- Secure cloud storage and centralized document management
- Web portal for document access and management
- Full-text search using keywords, categories, and tags

Newly Added Features:-

- Multi-user access with role-based authentication
 - Allows multiple users to use the system with secure login. Each user has specific roles such as Admin, Editor, or Viewer, ensuring data privacy and controlled access to documents.
- Low-light document capture using image enhancement
 - Improves the quality of document images taken in low-light conditions by automatically adjusting brightness, contrast, and sharpness using image processing techniques.
- Voice-integrated search functionality
 - Enables users to search for documents using voice commands instead of typing. The system converts voice input into text using Speech-to-Text technology and performs a search instantly.
- Document converter (PDF ↔ Word)
 - Provides an option to convert documents between PDF and Word formats. This helps users easily edit or reuse content without needing external tools.
- Trash & Restore Feature
 - When a user deletes a document, it first moves to a Trash section instead of being permanently removed. Users can restore accidentally deleted documents anytime from the Trash.

➤ Document Summary (AI-based)

- Automatically generates a short summary of long documents using Artificial Intelligence. This helps users quickly understand the main content without reading the entire file.

➤ Document Sharing with Access Control

- Allows users to securely share documents with others by providing controlled access (e.g., view-only or edit permissions). This supports team collaboration while maintaining document security.
